

Exploratory Data Analysis - Music Dataset

Your Name

December 2025

1. Introduction

This report explores the music dataset provided by an online streaming company. The goal is to understand the data quality, find patterns, and help data analysts collect better data in the future.

2. Data Import and Setup

First, we load the necessary libraries and the dataset.

```
# Load required libraries
library(tidyverse)  # For data manipulation and plotting
library(ggplot2)    # For graphs
library(dplyr)      # For data wrangling
library(corrplot)   # For correlation heatmaps
library(readr)      # For reading CSV files

# Load the dataset
data <- read_csv("data.csv")

# Show first few rows
head(data)

## # A tibble: 6 x 19
